

Project Management Trends

Throughout the history of the practice of project management we have been subject to a plethora of techniques and practices that, while fashionable at the time, became obsolete very quickly. For several years many saw Agile as one of those short-term quick-fix ideas that would soon be remembered as nothing more than a buzzword.

By now most of us realize that that hasn't happened! Agile has become one of several trends that are changing the way we accomplish our goals. In this brief presentation, Lisa and Dave will look at some of the current trends that are shaping our industry, and then you can decide...fashion or fundamental?

As a result of this presentation, you will be able to:

1. Identify current trends within the project management industry
2. Learn how those trends may drive project management practice
3. Understand ways to adapt a project environment to align with best practice
